

INNOVATORS IN BRUSH TECHNOLOGY

NAMPOWER™

Nylon Abrasive Material Brushing Tools

INCREASE
performance

DECREASE
costs

BOOST
reliability

Brush Research Manufacturing is proud to offer the leading choice for in-line machine deburring, edge radiusing and surface finishing applications: Nampower™ Tools. These tools are the highest quality abrasive brush products found on the market today. Composed of flexible abrasive nylon filament, these high-performance tools create reliable, consistent and cost effective results. Nampower™ Tools are easily integrated into today's automated machinery, CNC machining centers, transfer lines and robotic cells.

NAMPOWER DISC BRUSHES

DOT STYLE

Dot Style disc brushes are used for general purpose edge deburring and surface finishing applications. The Dot style is an economical choice for light deburring applications when part conformity is important. Dot style brushes provide greater flexibility and allow entry into small holes and spaces with ease.

TURBINE STYLE

Turbine style disc brushes are ideal for medium and heavy deburring applications. Our unique combination of Silicon Carbide and Ceramic filaments are used to allow the brushes to cut faster and last longer than any other brush on the market. The Turbine style filament is a high density fill that is ideal for short cycle times and long tool life.

COMMON NAMPOWER APPLICATIONS

Brush Research introduces a truly unique approach to in-line machining and deburring systems with our combination filament disc brushes. BRM's new disc brushes are the highest professional grade tools on the market today. Manufactured using a fiber reinforced thermoplastic base, Nampower™ Disc Brushes provide greater rigidity and stability. This results in a more balanced tool that provides improved tool performance and longer tool life.

The Nampower™ product line works with materials which include but are not limited to: metallics, super alloys, plastics, composites, advanced composites, metal matrix, ceramics, woods and more. Now the advantages of abrasive nylon material can be used to automate finishing processes on VMC, HMC, FMC, CNC and robotic applications producing a consistent finish from part to part. BRM's Nampower™ line of abrasive nylon tools sets the standard for performance and reliability.

- + Deburring
- + Rust removal
- + Gasket cleaning & removal
- + Roughing
- + Finishing prior to painting and plating
- + Removal of silicon glue, paper gaskets and flash from rubber and plastic
- + Pre-cast concrete mold cleaning
- + Spot finishing
- + Improve surface finish
- + Weld cleaning
- + Clean fiberglass
- + Plastic automotive parts

FLOW THROUGH TOOL HOLDERS

PART #	SHANK DIAMETER	HOLDER TYPE
ADHLWMP	25mm	Standard Collet Flow Through
ADHLWMSL	25mm	Standard Sidelock Collet Flow Through
ADH16P	16mm	Standard Collet Flow Through

All sizes of Dot style and Turbine style NamPower disc brushes are designed for use with our "Flow Through Coolant" holders. The reusable holder allows coolant to flow from the brush center. This results in better lubricant dispersion which permits the brush to run at greater cut depths and drastically reduces heat generation. 50mm, 60mm and 80mm brushes are designed to work with our 16mm shank. 100mm, 125mm and 150mm brushes are designed to work with our larger flow through coolant holders with 25mm shanks.

NAMPOWER COMPOSITE HUB WHEEL BRUSHES

DIAMOND WHEELS

DIAMETER	FACE WIDTH	TRIM LENGTH	ARBOR HOLE	GRIT	PART NUMBER

200mm (7.87")	15mm	30mm	3-1/4"	.012/600	DW200X15X600

Ideal for polishing and producing edge radii on hard materials including diamond, CBN, ceramic, carbide, hardened tool steel and glass. Diamond filament wheel brushes are used to produce an edge radius on cutting tool inserts and to polish the flute relief on drills and end mills.

An excellent alternative to standard wire wheel brushes. Their unique, balanced construction puts more cutting tips at the point of attack which results in better brush performance, less filament breakage and more even brush wear.
